SUMMARY

I am an Analytics Engineer with 2+ years of experience building semantic layers, Power BI solutions, and Databricks-based data products. I combine Python, SQL, PySpark, SAP Datasphere, and AI-assisted analytics to automate reporting, improve data access, and enable self-service analytics for business and engineering teams.

PROFESSIONAL EXPERIENCE

07/2025 – 05/2026
Pullach, Germany

Linde GmbH, Linde Engineering - Commercial Department
Data Analytics & Digitalization

- Designed and enhanced enterprise Power BI dashboards for commercial and engineering stakeholders, building data models, DAX measures, Power Query transformations, and Row-Level Security to meet complex reporting requirements.
- Contributed to migration of analytics use cases from SAP Datasphere to Databricks Lakehouse, structuring Delta tables across Bronze, Silver, and Gold layers and validating data quality during Agile sprint cycles.
- Automated reporting and analytics workflows with Python, PySpark, SQL, Microsoft Graph API, and Databricks notebooks, including a row-level commenting architecture that synchronized Power BI user input back into Delta Lake tables.
- Developed an AI-integrated Power BI assistant using Chainlit, MCP, Databricks Model Serving, and a .NET server to automate DAX authoring, relationship handling, and model operations through conversational workflows.
- Built a predictive forecasting model in Databricks that combined vector embeddings, clustering, k-NN retrieval, and LLM classification to estimate engineering manhours, cost impact, and schedule deviations across 23 disciplines.
- Provided cross-functional Power BI consulting, training materials, and demo sessions on data modeling, DAX, Power Query, and self-service analytics to improve report quality and adoption.

02/2026 – 08/2026
Pullach, Germany

Linde GmbH, Linde Engineering - Commercial Department
Master Thesis - Semantic Layer

- Thesis Title: ***Designing a Semantic Layer for Enterprise Analytics and AI Integration.***
- Architected a semantic layer and conversational analytics solution on Databricks Apps that connected business users to 400+ enterprise data products through LeanIX, Delta Lake, and governed SQL generation workflows.
- Implemented AI-integrated analytics capabilities with OpenAI Agents SDK, MLflow, MCP, and schema discovery logic to support product search, relationship mapping, lineage exploration, and context-aware query generation.
- Built governed access controls with Delta Lake, Row-Level Security, Unity Catalog, and SQL validation rules to enable secure self-service analytics and faster enterprise data discovery.

04/2021 – 05/2023
Faisalabad, Pakistan

Hyundai Nishat Motor (Pvt.) Ltd.

Data Analyst and Process Improvement Engineer

- Built Power BI and Excel dashboards for production, quality, downtime, and defect KPIs across three assembly lines, translating operational requirements into interactive reporting for cross-functional teams.
- Automated daily SAP data extraction and reporting workflows with Power Query, Excel VBA, and Power Automate, improving data accuracy and eliminating manual spreadsheet-based compilation.
- Performed operational analytics, man-hour analysis, and root cause analysis to support process improvement initiatives, including workload balancing that reduced assembly cycle time by 20%

SKILLS

Data Analytics & Business Intelligence – Power BI | DAX | Power Query | Row-Level Security (RLS) | SAP Datasphere | Semantic Layer Design | Self-Service Analytics

Data Engineering & Cloud Architecture – Databricks Lakehouse | PySpark | Delta Lake | SQL | Unity Catalog | Data Pipelines | Databricks Workflows

Artificial Intelligence & Machine Learning – Large Language Models (LLMs) | RAG | Vector Search & Embeddings | OpenAI Agents SDK | MLflow | Python | Scikit-learn

Software Engineering & Enterprise Automation – FastAPI | Chainlit | Microsoft Graph API | Power Automate | REST APIs | GitHub | Reporting Automation

AI-Assisted Development & Tools – Model Context Protocol (MCP) | Databricks Model Serving | Databricks SDK | Databricks Apps | Unity Catalog Volumes | Claude Code | uv

EDUCATION

03/2023 – 08/2026
Wernigerode,
Germany

Master of Engineering, Technology and Innovation Mgmt.

Hochschule Harz

- Grade: 2.2/5.0
- Relevant coursework includes: Data Analytics, Big Data, Digital Transformation, Agile Requirements Engineering, Market Intelligence, and Information Retrieval.

12/2015 – 10/2019
Karachi, Pakistan

Bachelor of Engineering, Mechanical Engineering

NED University of Engineering and Technology

- Grade: 1.7/5.0
- Relevant coursework includes: Applied Probability & Statistics, Advance Calculus & Linear Algebra, Advance Mathematical Techniques, and Computer Programming & Applications.

LANGUAGES

English Level: C1	German Level: B1	Urdu/Hindi Level: C2
